

FALCON SECURITY SYSTEM™

PTI Integrated Systems Falcon Security System is the most reliable security system available in the self-storage industry. With more than 20 years of experience, PTI continues to add innovative features and benefits to its flagship stand-alone Falcon Security System.

Combined with PTI's Falcon 2000 Software, the stand-alone Falcon Security System is a significant security tool designed to secure the facility and the customer's stored property.

BENEFITS

PTI's stand-alone Falcon Security System is an independently controlled security system, operating multiple access and security devices to control security in designated areas. No costly external software is required to operate PTI's stand-alone Falcon Security System.

SOLUTIONS

PTI's stand-alone Falcon Security System interfaces to all industry standard management software but is not dependent on the management software for access updates. In the event of computer failure, customers facility access is maintained directly in the Falcon Base Unit. With easy to use instructions silk-screened onto the Falcon Base Unit, maintaining security is a snap! Facility operators know that the storage facility and customer's possessions are secure and customer satisfaction remains constant.

TECHNOLOGY

PTI's stand-alone Falcon Security System runs on a RS485 communication network using multi-conductor shielded wire. A RS485 communication network is used for efficient and consistent communications from the Falcon Base Unit to the security devices. 18 gauge shielded wire is used for consistent power supply with power surge protection.

QUALITY

PTI's Falcon Base Unit is housed in an attractive and sturdy aluminum case with an easy to use tactile touch pad. The Falcon Base Unit is a non-volatile device that retains all data in the event of power failure. PTI's Falcon Base Unit has 24 functions ranging from setting up access zones, devices, units and rentals; operating door alarms, lighting and elevator controls; and report generation.

CONVENIENCE

PTI's Falcon Base Unit is housed within the storage facility office for easy access. PTI's stand-alone Falcon Security System can be used in remote locations when manager supervision just isn't possible. PTI has innovatively engineered a great remote solution!

Using Falcon 2000 software, the manager can operate the stand-alone Falcon Security System via modem from a remote office located anywhere. Simply attach a modem to the Falcon Base Unit and update the Falcon 2000 software from the home office site. Falcon 2000 will initiate the update to the Falcon Base Unit via modem. Remote access control has never been so easy!

INTEGRATION

PTI Integrated Systems stand-alone Falcon Security System is another part of the entire integrated system offered by PTI. The Falcon Security System is the most reliable and functional stand-alone security system available in the industry!

Experienced electrical engineers and programmers with extensive knowledge of the industry design PTI's Falcon Security System. Progressive programming tools allow enhancements to be added easily to keep up with tomorrow's changing technology.
